

Expansion Board Instruction

In order to meet clients' further demands, our company has done some improvements for LED controller, that is, expansion board.

1. Function: when expansion board combines with HUB, which will become a set of instrument for LED controller. Then you can connect two pieces of HUB with LED controller with the help of expansion board, which will help clients to connect lots of modules.

2. Graphics of expansion board as shown in image 1-1 in below:

Image 1-1

- Each interface of expansion board and pay attention to some points, as shown in image 1-2 in below:

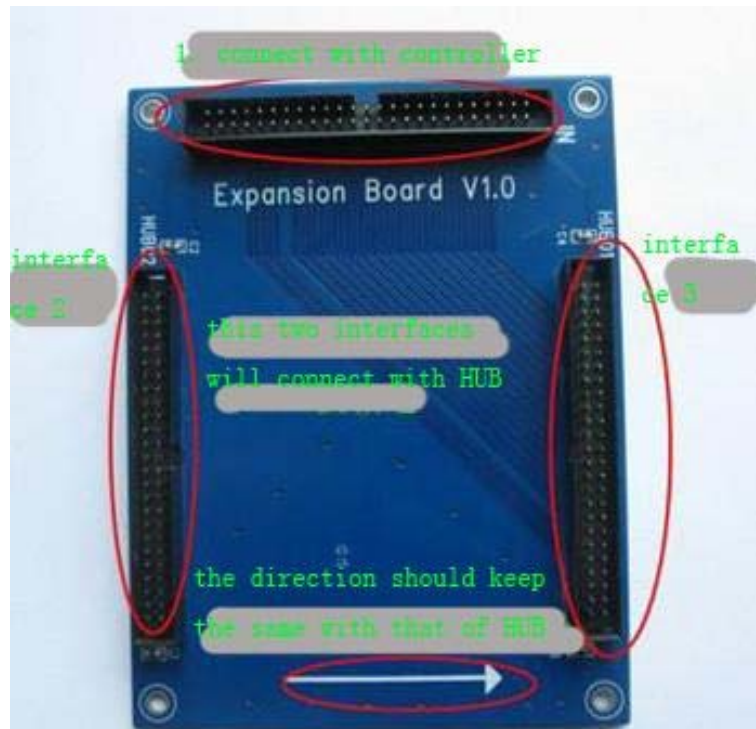

Image 1-2

Connecting expansion board with HUB, please make sure that the direction is right, as shown in image 1-3 in below:

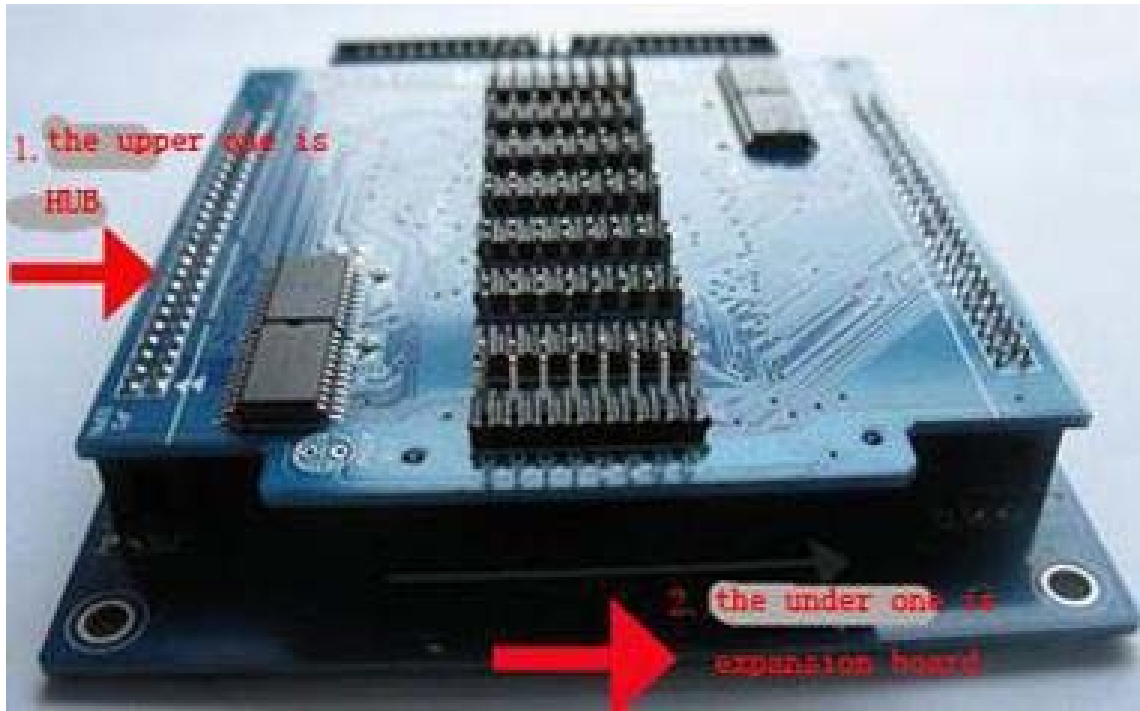

Image 1-3

4. connection diagram of HUB and controller with the help of expansion board, as shown in image 1-4 in below:

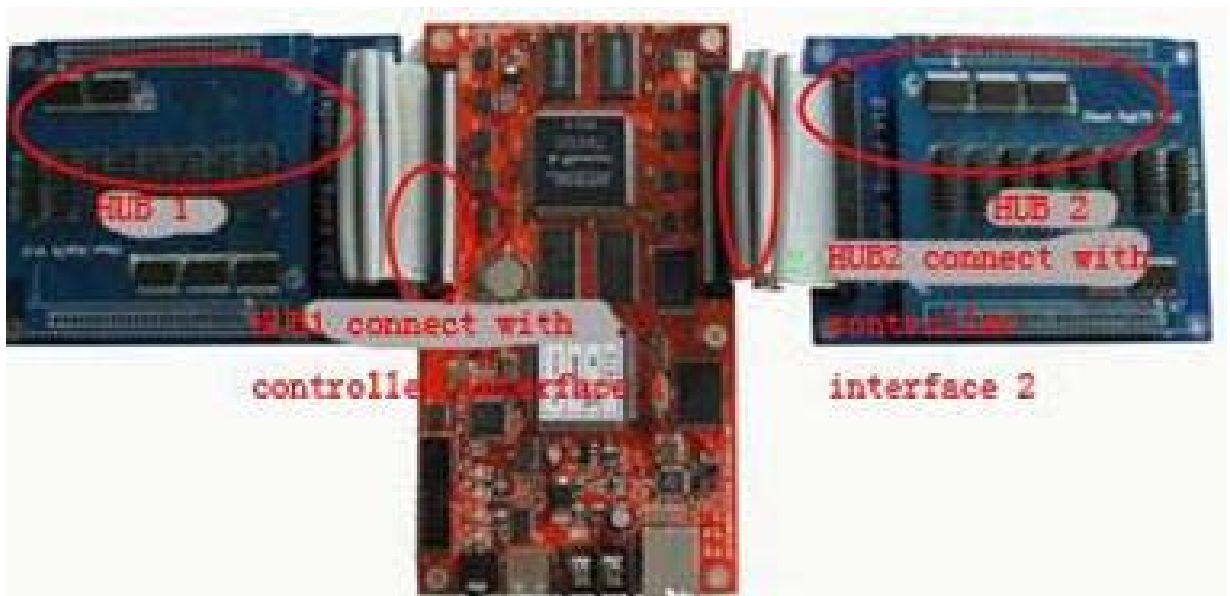

Image 1-4

NOTE: one controller could connect two pieces of HUB with the help of expansion board.
